THE TOTAL THEORY

ALEKOS CHARALAMPOPOULOS

INTRODUCTION

A cosmic theory of the Total as my own THE IDION, must unite the queen of philosophy and theology with the physics, mathematics and all the sciences. All the sciences find their position in this cosmic theory and they are overturning wrong conceptions of the sciences, such as physics, which terrible feebleness, as the not consequence of its metric systems (SI, CGS).

The cosmic theory is the theory of the Total and does not except the theory about the God (here Goddess), but it is coming out in the creation, with the help of the physics. This cosmic theory applies a new theory of physics, and it is a unique, as the previous cosmic theories were supported on the independently created physics and they didn't fix the physics, as it does this cosmic theory. About the atom of the hydrogen that we will describe it, will combine two new theories, at them we were coming on.

The cosmic theory of the Materialism, is in some subsets of THE IDION, (Gnosticism[1], Materialism and THE IDION are the three cosmic theories, they are formulated of the beginning of the mind beings, of the beginning of the civilization of the humanity).

You ought to know, that all it describes a cosmic theory, or the theories of physics, are exactly how we humans describe things, matter from the micro-cosmos to the mega-cosmos and the possible immaterial existence. That is, how we understand and mind the things. If cosmic theory THE IDION is right, it is partial right the cosmic theory of Materialism, because it is partial subset of THE IDION, but it is wrong the cosmic theory of the Gnosticism[2]. This

---

[1] Our information about the Gnosticism, is supported to the document of Erineus archbishop of Lyon France, 2nd century CONTROL AND OVERTURNING OF THE PSEUDO INFORMATION, in the document of Heppolytus archbishop of Roma 2nd century CONTROL ON EVERY HERECIES and some reports of other documents of the Cristian authors of the three first centuries. The physics conception of this cosmic theory, it is contained in the document of Clemens archbishop of Roma 1st century, DISCUSIONS.

[2] In according to the different discoveries of the Gnosticism, there is an upper God the Depth who with his wife Silence, they born two pair of Eones (Eon= the always existing, the God). They born 4 pairs and they born 8 pair of Eones and it is continuum to the different number of Eones, in the different forms of Gnosticism, into the skies they are lived. As saint Maximus reported in THE COMMENTARIES ABOUT THE GOD NAMES, the Eones are the Angels.
Again, the Gnosticism as the Materialism is accepted the existence before the matter. It is considered that initially existed before plasma in chaos form, on it the God created the universe.

discover makes necessary the inferior ability of the Gnosticism's creators to describe the material and immaterial. And here, it is created the quote. Are we the superior mind beings into the universe and if we are, are we able to describe the Total? Here, the cosmic theory THE IDION, it is named in its evolution, that is in continuum evolution and in this work it is becoming THE TOTAL THEORY, because it is reported to the Total. We'd say that it belongs to Pantheism (all is God). Then the Total, and the immaterial and the matter are the God. We could say that it also belongs and in the Panentheism (everyone is founding into the God), but in this case we'd say that everything is founding into the God, and it'd not bring doubts.

As the ancient Greek philosophers, when they were created their theories (Aristotle called them nature philosophies), they put principles, so it is here.

METHODOLOGY

As the ancient Greek philosophers set the principles for the building of their theories, so here, it is set a principle, as that, the existence before of something indeterminate and they are followed the propositions.

The proposition of the physics is coming on, is the standard of the measure of distance (met) and that the theory of the diffraction is right, that is, the lengths of visible radiations are measured correctly.

It is used the induction as the tool for the development of the theory and they did acceptance-propositions on them the theory it is applied. The theory is describing the Total.

THE PRINCIPLE OF THE COSMIC THEORY

The unique philosophy principle is the pro-existence and the something indeterminate, is born her self in person, with the initially existence of elementary Logos[3] (that is means Logic, reason, cause, ratio, speaking). The Logos, the logic, is the way of the existence of the things and again it is rules of the thought. It is expressed with the laws of nature and its proposition is the existence of the reality, the matter).

Before born her self of the indeterminate in personal Goddess, it was an upper, superior reality, something as the Brahmanism is accepted for the Brahman.

The personal Goddess has idioms, characteristics, as the Time and the Opposition. The Time is divided in distances that they have beginning and finishing. But as every action, as the actions of universes creation, it is being in some timing, it has time beginning. So, the Time is existing before the universes creation and we suppose that the Logos, before the creation of our universes, it was the cause creation of others universes they are destroyed, or it was the cause

---

[3] In the civilization we are running, for first time, Heraclitus spoke about Logos.

of other form of reality or realities, they were found into the Time and with Oppositions. Then the Time as idiom of the Logos it has the person Goddess, it is motion[4].

But the Time has distances, beginning and finishing, it is proposed the existence of the Opposition. And the Opposition for the same reasons, is an idiom, characteristic of Logos and the personal Goddess.

Born her self from the indeterminate, was in dimensions and not dimensions Zero. The in dimensions Zero (nothing) is infinite, it is the infinite space, and it has as its idiom the continuum ether. This ether, is the in dimensions Zero, it is infinite. The in dimensions Zero is vacuum of matter, because it is not material. (And the vacuum is not being (material) said Democritus).

The not in dimension absolute Zero, is the vacuum has not dimensions (it is the limit of the lasting cut of a volume, the cutting in the infinite). There, they are nesting the ideas, the energies and the forces, they are immaterial.

THE GENERAL PLAN OF THE BEING

The logic[5], the ethic and the means (ideas) generally haven't mass and weight, they are not limited into a space and into a section of time. If we accept that expansion of the Goddess logic are the laws of the universes, then the time is continuum and absolute[6], the space of the universes is empirically infinite and the space of the total, of the ether, is infinite, without finishing and then the immaterial is and of the ideas[7] and the means and it is not being.

You consider a box that we are cutting it, in infinite times. It tenses to a limit, the ZERO, the nothing, the absolute vacuum and it has not dimensions. This is not being, because it is immaterial. The immaterial means (senses) and the ideas are nesting into not dimensions zero.

The philosopher Democritus considered as principles the full and the vacuum. On these principles built his theory. Den, he called the atom lines[8] and swirl of the atom lines, are the atoms of the matter, they are differed shorts. Mi-Den (zero) he called the vacuum. «Zero (Miden) of not being is becoming, not to the not being is in wearing» he reported. It is the

---

[4] Unit of Time is uniformed repeated motion of a material body and the Time is motion and it is absolute.

[5] Of the lessons of my philologist Ioanna Tsampakalou in high school, "the Logos was ancient Greek word and its first mean is the logic, but again it is the cause, the ratio and the speaking». This I remembered on my early times reading saint John Gospel (at the beginning was the LOGOS and the Logos was reported to the God and the God is the Logos). I remembered it when I came back to the God living, from the materialism).

[6] The relativity of the time, is coming from the theory of relativity and the its two wrong axioms (the frame systems are equivalent for the describing of the motions and the effects of the nature, with the same laws and the velocity of the light is constant and it is the same for everyone frame system).

[7] The theory of ideas is reported of Socrates and Plato. As Plutarchus of Cheronia reported in ABOUT LIKED PHYSICS DOGMAS OF PHILOSOPHERS, The ideas are found in the thought and fantasy of the God.

[8] DEMOCRITUS, edition of Cactus.

plethoric theory of the universe and the birth, the creation of the vacuum in the material. This theory made thinking the writer.

But the numbers[9] are ideas and they are infinite. And the space into they are found the universes, is infinite. Then the INFINITE is immaterial and like immaterial, it is the space, space of ether and the ether is not material, it is in dimension ZERO. In queen Greek language, the language of the Goddess, sub +exist (υπάρχω)=to exist, I am subset, part of the total. The empirically infinite universes (α+ πείρα = εμπειρία (that is empirically infinite), το άπειρο, (grand dictionary 11th century) and α+ πέρας, άπειρο, ατελείωτο, the infinite without ending), because the universes have empirically infinite limits.

And there is this, it has birth and dead, this has mass and weight and limited dimensions in limited time.

The infinite that was principle for the philosopher Anaximander in his nature philosophy, but and the means and numbers of Pythagoras, there are them, because there were fixed as idioms of the person. «By» the Infinite, it is the not in dimensions Zero. The Total, The person is female. Born her self in the person Total, and the Zero and the Infinite are consisted characteristics of the personal Goddess, the person Goddess is self born. Now, the not in dimensions Zero is coming like tank of the ideas, that is, the Total means.

The Zero and the Infinite, as we justify are not numbers.

The LOGOS, the Logic, was into the Total, it concepts the ideas and the numbers (they are ideas). The Total preposition is the Logic, that is, before being in the Total, to include the ideas. That is we have now, motion and structure of the ideas, evolution of the Zero, result of born her self of the indeterminate to personal Goddess (From before upper-superior reality, as reports Brahmanism for the Brahman). And as we had before and we have now, that is TIME (it is motion after born her self). And now there is the road, why not the TAO, it is meaning road in Taoism.

The LOGOS is coming on like the existence that is landed in the fantasy of the Total. It coming on like an absolute characteristic of Total. The LOGOS has next to it the TIME[10] and the OPPOSITION and they are characteristics of the Total, as again the INFINITE[11] and the not in dimensions ZERO. They are idioms of the Total, There are them and essentially it is beginning the TIMING state of the coming creation. With the meaning of the Total, of the ideas, it is her evolution because born her self, from upper –superior reality it was before, to the Total. And the person it is fixed of the Zero, the Infinite, the Logos and the Opposite and the Time.

THE CREATION

---

[9] Pythagoras for building of his theory, put as principle the numbers.

[10] The Time is motion, uniform repeated motion of a mass, is unit on time. Before of the creation of the universes, the Time was motion (actions) of the personal logic and with the fixing of the Infinite and in not dimensions Zero, it was actions in this. Aristotle in PHYSICS and the san Augustine in CONFECSSIONS will report the Time as motion.

[11] The Infinite is the infinite space. In the creation, in the universes, the space is fixing of the distribution of the masses and it is absolute.

The not in dimensions Zero is the "space" of the fantasy of the Total, and it is fixed the in infinite space, as the distribution of the points. She puts in harmonic oscillation of the volume the points, into her fantasy. The points are not in dimensions, consequently they are Zero. The oscillation is $V=V_{max}\cos(kx-\omega t+\pi/2)$ and when $kx-\omega t+\pi/2=0,\pi,2\pi,\ldots$ then $V=V_{max}$ (that is, the in not dimensions point is Zero (0) on $\pi/2$ for the cosine and V_{max} for the sine and it is the beginning of the fantasy and the oscillation of the points. The in not dimensions Zero, where the sine is beginning from the V_{max}, essentially is put this oscillation as,

$$V=V_{max}e^{i(kx-\omega t+\pi/2)}= V_{max}\{\cos(kx-\omega t+\pi/2)+i\sin(kx-\omega t+\pi/2)\}$$

Here they are separated the roads. The $V_\iota =V_{max}i\sin(kx-\omega t+\pi/2)$ happens now, in the fantasy of the Goddess and the $V_r=V_{max}\cos(kx-\omega t+\pi/2)$ happens in the reality. The beginning of the reality is the $V_r=0$, where then the $V_i=V_{max}i\sin(kx-\omega t+\pi/2)=iV_{max}$, that is the volume of the expansion of the point, in the fantasy of the Goddess. But when $V_r=V_{max}$, then we have real volume of the ether.

The points are alternated to positives and negatives in grid of cube. They have different of phase $\pi/2$ and they fill the space, alternately with positive and negative ether.

But now, it is separated the fantasy of the Goddess, of the reality. The fantasy of the Goddess is before being on $\pi/2$, as it is in $(kx-\omega t+\pi/2)$ phase, and it is immaterial. It is coming on with the Logic and the laws of the Logic or of the nature (they are expansion of Logic), they are in the fantasy of the Goddess, where it is being the imaging Total before the real being. Her fantasy is realistic.
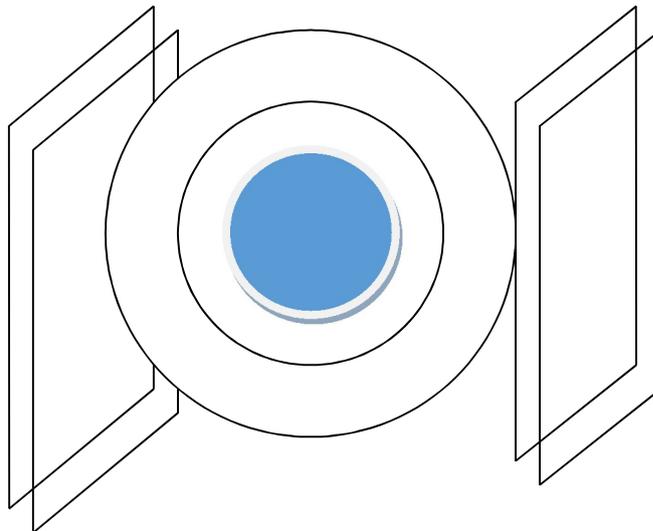

Her self birth of the personal Goddess, brings the meaning of the creation, where it begins from the not in dimensions points. The meanings are the standards, the constants of the physics but and the laws of the nature, they are going on. The standards are the factors of the birth of the reality, with the laws are meaning, and they are on the bubbles of the ether and on the particles of the matter. These factors are and the ether mass, the angular moment, the impulse, the magnetic moment, the electric field, e.t.c. of the particles. The meaning of the laws and the in it is coming nature, pro- exists in the fantasy of the Goddess.

At first, all are happening in fantasy of Goddess (and her multiple abilities help to she knows the future) and after they happen in the reality. In her fantasy she fixes continuum cubic hives of the points of the ether. Some hives have more density points. It is formed mixing of more density and rarer ether (hives of more density and other of rarer ether), that is of the IDION and the TRANSCENDENT NOT SUBSTANCE (they are the two sort of ether and the third, their mixing of the two ethers in the ENOSIA. It is average density of ether between the two before).

More density and rarer points of ether's hives

The ENOSIA is coming from the infinite and it is formed central bubble, it is contained rare Transcendent not Substance. As it is in force the law of gravity, the same force is in force for the ether, for the not substance of ether. The pressure on this mega-cosmos bubble is infinite and into the bubble they are "evaporated" grains of Idion, it is most density ether. These grains are infinitesimal small (dV volume) and they have empirically infinite velocity. They are conflicted each other and with the walls (shell) of the bubble and they are balanced the infinite pressure ($P\infty_A' + P\infty_E = P\infty_A$, and $P\infty_A' =$ the infinite when it is subtracted from the initial infinite the empirical infinite (that is the pressures), $P\infty_E =$ the empirical infinite but essentially finite and out of our experience and $P\infty_A =$ the infinite, the infinite pressure) . The infinite pressure of Enosia to the bubble. It is formed nucleus of Idion, spherical, in the middle of the central bubble and it is formed shell, with 32 sub-shells around the bubble.

The central bubble (blue), is coming out spherical waves of dense and rare of the ether with infinite velocity, they are coming on two of the six surfaced universes.

Into the bubble, the empirical infinite grains of infinitesimal volume, are conflicted with empirically infinite velocity each other and on the shell of the bubble. When the conflict is vertical and maximum with the shell of many grains, it is formed cavity and it is closed to an

infinitesimal bubble (the viscosity of the Enosia is low). This bubble, because of the increased pressure round the large bubble, it is coming out the waves and the small bubbles of the large bubble.

THE INFITESIMAL BUBBLES ARE FORMING THE ATOMS

And into the infinitesimal bubbles, they have formed infinite grains, they are balanced with the conflicts with the shell, the outer superior pressure. Then the grains are conflicted with the shell, they are formed cavity and distortion in the rounding ether Enosia, it is gone far it, and it is dislocation of dense ether, it is the potential line of the electric field of the bubble. The atoms of the hydrogen are the same, but with rotated oscillation, everyone is consisted of two bubbles.

In our theory, it is going on two same bubbles in every atom, with rotation around the center of mass and with the difference of phase π.

The two "particles"-bubbles are rotated with velocity v=c. They are emitting the electric field of the ether-bubble with symbol E and o is the ether mass of the bubble and because of the different phase π, they are attracted. The electric field is distortion of ether. When two potential lines of the field of the two peripheral particles-bubbles are meeting, it is formed the graviton, turning distortion of the ether. So, the two peripheral bubbles is the ether mass of the atom.

THE MEANING OF THE ZERO AND THE INFINITE IN THEOLOGY

The Zero and the Infinite are indeterminate. Here it is found the negative Theology of the Christians. In the SECRET THEOLOGY Dionysius Areopagites will reports, "and in the Zero information, hyper mind information". And saint John Damascinus will say "infinite the God and not understated and this is only understanding, the infinite and the not understanding".

MATHEMATIC ACTION WITH ZERO

They are prepositions on mathematics, the multiplication of every number with the zero, it is equal to zero. The dividing of a number with zero, it is indeterminate. The division of the zero with other number, gives zero. The addition or the subtraction of the zero to a number, it gives the number. We make addition, subtraction and we are multiplied or divided uniform kinds, that is, numbers. The zero is and a number, and it is indeterminate and ONE. The numbers and generally the mathematics are reflected the Total and the matter.

See now, a^3=axaxa, that is, the a in the third power, it is multiplication of the same a, to its self for three times. And a^n is the multiplication of a to its self, for n times. It is consequent of

the logic, that when a, is multiplied zero times its shelf, it is ZERO. Zero times its self of a number, is zero. And then, we must make an expansion, and we are known,

$$a^n/a^n = a^{n-n} = a^0 = 1$$

And because $a^n = a^n$, that is, zero times the a to its self, it is equal to one. The logic of the mathematic consequence we followed, gives unit to the a in the zero power, but the logic consequence says that zero times the a to its self, it is equal to the zero ($a^0 = 0$). Is it contradiction, or logic necessary?

The being is the matter, the not being is the immaterial, as we came up.

See now, the kinetic energy is, $E_{kin} = \int_0^v o \frac{dv}{dt} dx$ = ½ ov^2. The kinetic energy is the measure of the motion of a material body, it is representing of the half ether mass to the velocity in the square power. This the same the kinetic energy, is combination of ideas, although it is amounted it is combination of ideas, it is immaterial, it is in vacuum of matter, it is ideas (meanings) of mass, and velocity, they are immaterial), it is absolute vacuum as ideas, and it is in dimensions zero as it is investment on the matter. And look out, the integral made from zero to the velocity v, as it should have, initially, of everyone body. That is, initially all are began of the zero.

THE MEANING OF THE ENERGY

As it was reported, the kinetic energy is a measure of the motion of a material body. It is no scalar quantity, but it is combination of scalar sizes, the mass of the ether, and the measure of the distance by divided of the time. Mass of ether, distance and time are the scalar sizes. The combination of the scalar quantities, gives the kinetic energy. It is a size, a quantity, it is combination of scalar quantities. These qualities and their combination are on the meanings (ideas) of the mass, distance and time. The meanings or the ideas of Plato are immaterial, the energy like combination of ideas is nesting in the vacuum, in the absolute zero. They are nesting qualities and the kinetic energy as it is quality, it is "coming out" from the immaterial and it is characteristic of the moved body, on it is investment.

The potential, the kinetic energy and the heat, are found qualities in the absolute zero, but in quantity are infinites.

THE CINTINUUM OF THE FANTASY OF THE GODDESS TO THE MATERIAL BEING

The ether of the creation, has the three idioms, the elasticity of the solids (it is infinite), the pressure of the gasses (it is infinite) and the viscosity of the fluids (it is low). The velocity of the ether waves is infinite, it is instantaneous in all the being.

If we accept that the earth is rotated around the sun, it is curried the ether because of the low viscosity of it and consequently it is not contracted to the experiment of Mickelson- Morley. If

the earth is about motionless on the center of the rotated universe, again it is not contracted with the experiment.

In the center of the macro-cosmos bubble, but and in the infinitesimal bubbles, there is the spherical nucleus consisted of dense ether (the Idion). It has radial oscillation, that is, $R=R_{max}\cos(\omega t+\varphi)$. This oscillation, is coming from the oscillation of its heat, which is $\theta=\theta_{max}\cos(\omega t+\varphi+\pi/2)$, That is, it is before the oscillation R of the nucleus.

The oscillation with frequency ω of the nucleus, is the bringing frequency, because in it is contained the order or the orders of the Goddess.

The changing of the radius is infinitesimal, empirically infinitesimal and it is curried instantaneously on the sub-shell, which is coordinated with the bringing frequency and it is oscillated. The 32 sub-shells have a proper frequency, they are coordinated with the bringing frequency, of increasing and minus of the radius of the nucleus.

We said that the Goddess is thinking with meanings (ideas). The meanings are represented by words they have letters and the every letter corresponds to a frequency of the nucleus changing. The meanings represent the material sizes, especially of the micro-cosmos. In every period inferior of 10^{-24} sec, in the fantasy of Goddess, she has all the laws of the nature and the logic.

The man has the independence, it is product of his logic he is following. The logic he is following, is product of the values or not values that he is coming in, on his life and before he formed them, baby, he had standard of values behavior. Then the fantasy of the Goddess is in evolution with the matter evolution and the men, in initial conditions that she is meeting frequently, in small time distances, from the before state. And it is going on the game of the reality. And her logic in coming up.

The atom i.e. is a meaning in the thought and the fantasy of the Goddess. The laws of the nature, that before they are coming out with oscillations of the nucleus and after the shell, they do the atom under the laws. The laws are transmitted with frequencies of the nucleus to the sub-shells and there, of the sub-shells, by the ether, to the infinitesimal bubbles and of there to the nucleus of them (in the bubbles of the atoms).

The Goddess having in her gulf all the energies, the kinetic, the potential and the heat, in immaterial form, as two masses are oscillated with a spring, the one is the heat in immaterial form to coming out the nucleus (the other oscillated mass), she creates quantity materializing, she oscillates the nucleus by changing the radius of it, with its heat changing.

The sub-shells are oscillated with interference, of interference of two sub-shells, or multiple sub-shells.

SIMPLE AND DOUBLE INTERFERENCE

When the light is plenty, the photons- electromagnetic waves are found in small distances and they are formed on two of them, simple interference. But I think that the density presence

of them, it is joining two simple interferences to a double one, by the condition that the average price of the frequencies, is the same for the two simple interferences. That is,

$$y_1 = A(\cos(\omega_1 t) + \cos(\omega_2 t)) = 2A\cos\{(\omega_1 t + \omega_2 t)/2\}\cos\{(\omega_1 t - \omega_2 t)/2\}$$

$$y_2 = A(\cos(\omega_3 t) + \cos(\omega_4 t)) = 2A\cos\{(\omega_3 t + \omega_4 t)/2\}\cos\{(\omega_3 t - \omega_4 t)/2\}$$

If the average prices of $(\omega_1 t + \omega_2 t)/2 = (\omega_3 t + \omega_4 t)/2$, then,

$$y_1 + y_2 = -4A\cos(\omega_1 t + \omega_2 t)/2\}\cos\{(\omega_1 t + \omega_3 t - \omega_2 t - \omega_4 t)/4\}\cos\{(\omega_1 t + \omega_4 t - \omega_2 t - \omega_3 t)/4\}$$

This is the double interference by the limit of the equality of the average prices. It could be formed multiple interference, with same processes, of 8, 16, and 32 cosines, they are corresponding to the 32 sub-shells of the bubbles.

THE THOUGHT OF THE PEOPLE

The animals are complex robots. But human beings have a control center. It is going on for bubbles they are rotated around the central mega-cosmos bubble and they are larger than the bubbles of particles.

Each bubble, has bringing frequency that is coordinated with the brain of every man. Every man could be a little God, but the standards and his values or not values, don't drive there. In matter, specially, in the living matter, there are the mutations of the DNA and different complex cell. So, a man could have of the birth or after, not normal structure of the neurons in the brain.

The brain is found in the continuum feedback with the bubble of its control center and the thought is in different planes. Sometimes it is low and maybe bad thought and more different of a litlle God, because the mutations of the brain neurons they are accepted the oscillation of the bubble of its control center, it is moderating the normal thought. And there is and the feedback of the neurons with the center of control and the center is reacted of this.

Because the bringing frequencies of the bubbles are finites, it is possible the frequency after the dead of the man (and the bubble that have it and it is the center of control), to be reincarnated in the other, but only man, in the going on the perfection of the control center. It is in reincarnation by the preposition of the new currier will be superior than before, in a curve to the Devachan of Buddhism, they are coming in the perfecting bubble. Devachan is smaller radius than the distance of the central bubble, where is plenty light energy, but as it is coming far of it, it is the dark. "And the hyper-substance, we see, cloud, that is hiding in the beings" Dionysius Areopagites. They are Helysia fields, of ancient Greeks.

THE MATHEMATICS OF THE MULTIPLE REACTIONS AND OF THE IN DEPENDENCE NATURAL REGIONS COMING OUT OF THE REAL TENSORS

Region and transformations between mathematic regions in mathematics, does not mean the frame systems are belonging in different natural spaces. But, as I always believed, and the mathematics are not seeming to have relation with physics, it has it, if we are using this with the right physical model. And the physical model is given of the cosmic theory THE IDION.

The real meaning of the tensor as expansion of the vectors, it is fortifying that universes are same in the not living matter and they are different only there, the independence of the men is acting.

NATURAL MODELS OF THE COSMIC THEORY

The cosmic theory anticipates that there are six universes, as the six sides of cube and in the center of the cube, it is the point of the central bubble control of the six universes. As we will show without expansion, the two opposite side universes, but and all simultaneously are reacted each other and are in interdependent.

In one universe we are living and into a sub-universe, the contractive positive, and it is reacted with the negative one and it is in force the same mathematics, as in the two opposite side universes.

We will make the analysis in the two sub-universes. The theory of the two sub-universes is up of the information[12] of the FALL of the human, the fall of the son of Astreos and Heos (Heos=dawn) Eosforos (Lucifer)[13]. As Lucifer was going on to be God, as it is anticipating Eones (Gods) the theory of Gnosticism, it was created simultaneously of his and Zeus, and it was teaching of Jesus Crist (the right-name information) and it was teaching in other acceptances and of others (the pseudo-name information) and this creation follows the fall, it was reacted the universe by Lucifer. In the far space, he put emitters of electromagnetic waves on right and different planets and they were separated the positives of the negatives ether mass particles, it is forming the two sub- universes.

In the atom of hydrogen, the two bubbles were rotated with different phase π and they had the opposite negative masses, in that nature. They were revolving around the center of mass, by two. Lucifer with radiation, separated the atoms in positive and negative masses, and it is separated (the universe) in two sub-universes, they are revolving with opposite turning. The angular momentum is opposite in two sub-universes, because in the one are the right turning atoms and in the other the left turning atoms, but the position vector of the galaxies and the suns or the planets or the particles is the same in the two sub-universes. Consequently, we consider that the atoms are the universes consisted, are corresponding each sub-universe the other sub-universe atoms and they have opposite angular momentums and magnetic moments and same velocities, accelerations and position vector. The laws of the universes are on all and the same, on all universes, under the determinism of the laws, the motions of the particles and bodies are following them. They are reacted and depended.

[12] It was given this information of the universe societies
[13] GOD BIRTH, Hesiodus

BUT THERE IS THE HUMAN INDEPENDENCE

But the man has the independence. As the ancient natural philosophers formed, the facts are coming on of six factors. Of God providence, of necessary, of fate, of luck, of auto (automatically), and of human independence. The laws of the matter create a large determinate and uniformity in two sub-universes, but God providence and human independence they create many times luck facts, they are not anticipated and determinate. So, in two sub-universes, or in the opposite universes, the nature as it is accessible to the men, it is changed. So, but all the determinate of the laws, a least parts of the universes is different, because they are reacted the men (with acts or wars, they are not the same in the universes). Consequently, we will construct the mathematics the depended two sub-universes, (or the other all universes).The universes are the same in the plenty their volume.
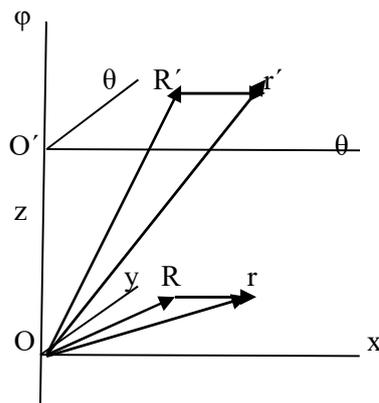

THE REGIONS IN MATHEMATICS

If we have a position vector and we are picturing it in a Cartesian coordinate system and in a spheral coordinate system, even they have the same origin the two systems, then the mathematicians say that they have two regions. But the physicist considers two different regions of two bodies, maybe in two coordinate systems, in any is belonging the two bodies. See two mathematic regions, in one the Cartesian system and in the other the polar system,

Cartesian and polar system, transformations are x=ρcosφ and y= ρsinφ

See now what it happens in transformation of a Cartesian system to a polar, of a position vector,

Rr//=R´r´=Δr, OR=R, Or= r, OR´=R´, Or´= r´

We have now a Cartesian and a polar system. The one is belonging to a positive sub-universe, and the other to the negative, they are two nature spaces. And it is in force the transformation,

$$\mathbf{\Delta r} = \Delta x + \Delta y + \Delta z = \mathbf{OR}(\sin\theta\cos\varphi + \sin\theta\sin\varphi + \cos\theta) - \mathbf{Or}(\sin\theta´\cos\varphi´ + \sin\theta´\sin\varphi´ + \cos\theta´) \quad (1)$$

It is going on a Cartesian and a polar system, two mathematic regions. But, if in this transformation we initially put **R** =0 and after **R=R´,** then we have two nature spaces of the two sub-universes (they are corresponding to the two coordinate systems xyz and x´y´z´) and in two, quality, mathematic regions, on them it is in force the same transformation. And in them nature spaces, the position vectors are equal. And in them we can correspond and spheral systems, as mathematic regions.

THE ONE BY ONE CORRESPONTING

Every particle of a sub-universe (or in one of the two opposite universes), is corresponding to the other universe, one by one. i.e. the spin or the angular moment of the atom, or its magnetic moment, are corresponding to one other atom of the opposite universe, but with negative angular or magnetic moment, in a common coordinate system, or they are in the two coordinate systems, the one in the first universe and the second to the other (they have parallel axis x,y and common the axis z. We give symbol u to one sub-universe and w in the other, then if s is the spin and μ the magnetic moment, it is $s_u \leftrightarrow -s_w$ and $\mu_u \leftrightarrow -\mu_w$. But for the position vector, the velocity and the acceleration, it is the corresponding, $r_u \leftrightarrow r_w$, $v_u \leftrightarrow v_w$, $a_u \leftrightarrow a_w$.

Already it is seemed the dependence and the relation one by one, of the corresponding particles and the total sub-universe with the opposite (or the one universe to the others), as and the galaxies, the suns, and the planets etc. **This is law of the nature**, It is not total, it is limited of these section there the men did actions or wars, they are coming from the independence of the men. And in these sections as it is acceptable, it is different the structure of matter, but in infinite universe, they are grains of not uniformity of the two sub-universes, or of the two opposite universes.

THE RIGHT MEANING OF THE TENSOR AND THE TENSOR CALCULUS

As we sow, in coordinate system xyz, we have the vector **Rr=Δr** and it is, **Rr//=R´r´=Δr and R´r´=Δr** is the equal vector in the sphere system O´θφ. It could be and this Cartesian x´y´z´, with parallel axis to the xyz. In this case, it is already formulated new laws of the nature, of corresponding one by one, and we will enter in the meaning of the tensor.
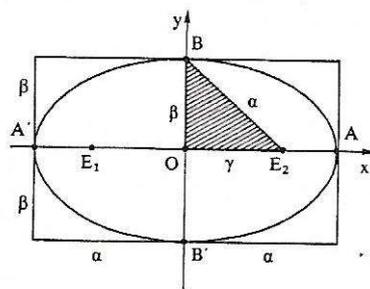

The word tensor is coming from the verb tense and if we are advised the Great Greek Dictionary of 11th century, it is coming and from the expansion. We give the symbol T to the tensor. So, it is **TRr=R′r′=Δr= =T(OR-Or)= (OR′-Or′)=Δr=(αOR-βOr).** And α,β two constants, when it is known the measure of the vector **OO′** (it is the distance of the two origins of the two frame systems). The tensor T makes expansion of a system[14], to the other, it gives the equal vector to the other system (it is not the tensor of differential geometry). So the constants α,β, are transformed the same vector, on its existence in other preferential frame system. The coordinate system are on the preferential frame systems of the two sub-universes, or on the two opposite universes on sides of cube, or on the four others universes. And they will fix the equal measure vectors, on the plane universes of the other sides. So, the six universes are uniformed and they are different only of the independence life of men, because the person of people have independence, and on the other universes people.

AND THE SCALAR SIZES ARE EQUAL

As we are known, the particles have the magnetic moment **μ** it is vector, it have expansion of the one universe to the other and it is equal and opposite in two universes, as the h. But $μ^2=μ^2$, that is the scalar product **μ.μ** $=μ^2$ is scalar size and it shows the action of the magnetic moment of the one universe, to the other moment of the other universe. And the ether masses o are scalar sizes, will be the same in the opposite universes.

ANISOTROPY AND UNUNIFORMITY OF THE SPACE

As, it is reported, the universes are flat. We examine the ellipse.

---

[14] On 1993 I wrote the work PREFERENTIAL FRAME SYSTEMS AND THE LIGHT LAW. The observer on the earth with his scientific organs, will say that the moon is revolving round the earth. But, and the observer on the moon, with his scientific organs, will formulates that the moon is rotating round the earth. The earth is a preferential frame system, and the velocity of the light is related to a preferential frame system and it is added or subtracted to the not preferential frame systems, they are moving into the preferential frame systems. So, they are not product the transformations, of general theory of relativity, it is wrong. The special theory of relativity describes inertial frame systems, there are not in the nature, it is not landing.

α= large semi-axis of the ellipse, β= small semi-axis, $γ^2=α^2-β^2$, e=γ/α the eccentricity and the equation of the ellipse, $(x/α)^2+(y/β)^2=1$ and -α≤x≤α, -β≤y≤β και e<1.

See now, when γ=0 and α=β, then it is circle. But, and it is the interesting, γ=α, then the focuses E_1,E_2 are coincided corresponding with the tops A´, A and then the ellipse is line section, it is case of ellipse.

We consider that the line section γ, tenses to the limit of the section α, then the ellipse tenses to be line section. We consider the α, empirically infinite and consequently this is the radius of the universe. If we are rotated the α, around of the β, on 360^0, then it is coming a flat circle, that is about the flat universe, With infinitesimal fat.

Now the radius r it has the center the focus E_1 or E_2 will be r=p/(1+ecos(θ-θ_0)) and the e, the eccentricity that tenses to the unit and the r then, will tenses of p/2 to empirically infinite.

But, the observer will found to a point of the line section (empirically infinite), of the large axis α and it will distance line section R of the focus E_1 , or E_2. Then, for this observer, there is very much anisotropy and not uniformity of the matter, he is observed an object that has distance r from the focus, the space if the object is moving (i.e planet), will changed as the addition of the vectors **R+r .**

THE PHYSICS OF THE COSMOTHEORY

1st atomic theory.

The centripetal force is,

$$F=mv^2/r= m^2v^2r^2/mr^3 =k/r^3= q_1q_2 /(4/3)πε_0r^3$$

The two bubbles we were showing for the atom of the hydrogen, have charge q and,

$$F= q^2 /(4/3)πε_0r^3$$

And $ε_0=1met^{-1}$ (there is no reason to be different of the unit). At CGS-stat Amp system, there was no the constant $ε_0$.

They arbitrarily came in the equation of the measure systems the constant k=1/4πε_0 (in the next equation first is the CGS-stat Amp system and second the SI)[15]

$$F=10^{-7} N= q^2 /4πr^2=k(Cb^2/4π(r^{-2}met)^2$$

In the CGS-stat Amp the unit is 1q (stat-Cb) and it is 1 Cb=3x10^9 stat-Cb (q). If you solve to the k, you will find the size of the constant $ε_0$ the physics is accepted, but they came in arbitrarily the k in the equation.
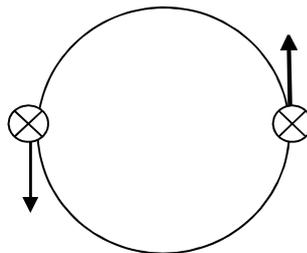

---

[15] ELEMENT OF PHYSICS Kougioumtzelis-Peristerakis p. 66

2^η theory.

The physics is supported on some formulas of the stated electromagnetism. Really, it is supported in the formula-law of the parallel conductors, $F=\mu_0 I_1 I_2 L/2\pi r$. Here already it is the constant μ_0 but it is a variant[16], it is fixed of the formula where it is applied, in micro-cosmos, or mega-cosmos.

Maybe you are knowing that in the micro-cosmos, the electric current I, is I=ef and e is the electric charge (electric currier) and f the frequency the charge has it. Here we are stopped the meaning of the charge and already it is coming in the ether mass o for the particles and the bodies. The ether mass o depends on the bubbles of ether of the body, or the particle and it has electric field, it is fixed of distortions of the ether, they are coming from the grains, then they are falling on the shell of the bubble, and they are going on the surrounding ether lines-distortions of the electric field. Then the electric current is, $I=o^{1/2}f$. That is, the current and the electric field of the bubble, are coming from the oscillation of the ether bubble and in reality of the root of the ether mass.

We consider the hydrogen atom. It is consisted of two same "particles"-bubbles of ether, they are attracted each other, and they have oscillation rotation round the center of ether mass.

Then the two electric currents are equal and homo-parallels, because we are accepted that the two electric curriers (differently electric charges[17]) are equal and opposite, they are revolving on radius r/2 around the center of mass, when the distance between them is r. Then the law of the attraction of the revolving bubbles is,

$$F = \frac{\mu_0 \left(o^{1/2}f\right)^2 2\pi\left(\frac{r}{2}\right)}{2\pi r} = o\omega^2 r \qquad (A)$$

The same formula is in force from the micro-cosmos to the mega-cosmos.

Here we make the acceptance that for this constant μ_0 we was knowing, it is about in force for the hydrogen atom ($\mu_0=4\pi \times 10^{-7}$ met) and in this atom, the current is I=1 El $=ef=o^{1/2}f$ and El is the unit of the electric current in the TTS (Total Theory System) we are coming in. That is, the constant μ_0 is in force for the current of parallel conductors, for 1 El of current. Because $\omega=2\pi f$, then r= 2.9×10^{-8} met for the atom of the hydrogen (if we are replacing o=m, $o^{1/2}=e$ in the equation of the force F of the first theory). This radius r is when the hydrogen is in 8 mbar

---

[16] I remember that in my early times of the researching, that I had located it is no constant, but variant.
[17] The electric charge is not fixed, is has no meaning. In oppositely, the electric currier is meaning the root of the ether mass, it has this currier ($o^{1/2}$)

pressure. We are combining the two theories and $q=e=o^{1/2}$, we took $f=1.299x10^{14}$ fz (fz=unit of the frequency in the TTS and unit of the time the uot=1/fz).

The $r=2.91x10^{-8}$ met we are found from the theory of Balmer $\lambda_{2,3} =\lambda_1/((1/\eta_2^2)-(1/\eta_3^2))=656$ nm and $r/2= \lambda_1/2\pi$. The λ_1 is the first wave it is revolving the hydrogen atom, and a total wave, it is a wave of reality of the particle. And $o^{1/2}=1/f$.

THE SIZES OF THE ELECTRICITY

The charge or better, the electric currier is $o^{1/2} =e$ and the ether mass o=m kgr-o and kgr-o is the unit of the ether mass, in TTS.

The electric current is $I=o^{1/2}/t$, $(kg-o)^{1/2}/sec= 1$ El and the magnetic field is $B=\mu_0 I/2\pi r$, will be the same dimensions with the electric current. And because $F=o^{1/2}E$, then the electric field E will be in the dimensions $(kg-o)^{1/2}met/sec^2$. And the voltage, V, $(kg-o)^{1/2}/sec^2$.

THE NOT CONSEQUENCE OF THE SYSTEM INTERNATIONAL

As it is reported in PHYSICS of Alkinoos Mazis and in the ELEMENT OF PHYSICS of Kougioymtzelis-Peristerakis, the unit of the SI, the Amp, is fixed of the electrolysis. The law of Faraday is,

$$m=(1/96500)(A/n)I.t=k(A/n)I.t$$

where m=the mass of the element is coming up the electrode in gr and A=atomic mass and n=valence of the element. It is fixed the Amp, $I=(m/0.001118.t)A$, where 0.001118 gr Ag, is coming up the anode of the electrolysis of $AgNO_3$.

For the measurement of the mass 0.001118 gr $AgNO_3$ it was fixed the constant k=1/96500, but this mass is not the gram-equivalent of the molecule of $AgNO_3$, because we are, here, taking out the methods of the physics, for the founding of the e,m,h etc.

As it is reported in PHYSICS of Halliday-Resnick , the dielectric constant ε_0 was measured of capacitor of parallel armatures $(C=q/V=\varepsilon_0 A/d)$. But, to do that, it must the law of Ohm is right. As it is known, the law of Ohm is, $V=RI$[18]. If it is Known the I (Amp), they are remaining two unknowns, the R and the V. There are standards of the resistances, they are kept in the measurements and the standards. But, nothing it is sure, that is standard is R=1 Ohm. It is arbitrary, so, and the V is arbitrary, and it was no proved the ε_0.
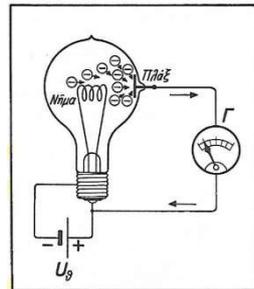

The above means that the System International has not consequence measurements, they are not combined without the coming in constants. That is, it is not eV= ½ mv^2 but it is $eV=kmv^2$.

---

[18] But it is, I=Ne/t=NeL/Lt=Nev/L and v=I/neA, n=N/Vol, A= the section of the conductor. And $eE=k'm\Delta x/\Delta t^2 =k'eV/L$, then $V=k(m/e)v^2=k(m/n^2e^3A^2)I^2$ and $R=k(m/n^2e^3A^2)I$

The measurements and the standards of the SI, as of every measurement system, are not combined and connected.

ABOUT THE IN FORCE PHYSICS, THE ENTISON'S EFFECT

As we formulated, the new physics here, does not accept electrons or protons. It was acceptant of the stated physics, that there are the electrons, of the Edison's effect[19].

Entison's Effect

In according with this effect, between of the Tungsten wire of fired lamp and metal plate that is found into the vacuum of the lamp, it was applied voltage. It was recorded fluid of electric current, when the lamp was turning on. It was considered that of the fired-red wire, were emitted electrons. It is acceptance as proof of existence of electrons.

But the light is large-oscillated and see (we use the root of the ether mass o):

$$o^{1/2}V=ov^2=o\omega^2r^2 \quad \text{and} \quad V=RI=kI^2=o^{1/2}4\pi^2r^2f^2$$

The current in the square power to a constant, is equal to the voltage it is applied and we proved it at before, only now the constant k must coming in the new data, where the charge e is replaced of the $o^{1/2}$. Then the direct current I is analogue to the frequency f, it has the atoms of the conductor, they are excited of the voltage V and they are fluid as the current I (I=ef).

In the cathode rays tube there is the Tungsten wire or the Platinum, where it is applied voltage with plenty current, even to the cold cathode and there, they are emitted photons. These photons, when they are coming in the anode voltages, they are polarized in the length and they are in aberration of the magnetic or the electric field. The photons are microscopic pairs of electric bubbles, they have different of the phase π and they are electric rings, and consequently they are as the classical physics describes the opposite charges, they are bubbles and small currents.

The radioactive radiations α, β, γ, are atoms of Helium the α, as the stated physics describes are "ions" atoms and the β are other "ions" atoms of hydrogen and the γ are photons. They are "ions" because the atoms have such oscillation, so we are accepted that they are ions with charge.

---

[19] ELEMENT OF PHYSICS, Electricity p. 419

THE CAPACITY AND THE COILS

There is not self-induction. There is no mechanism, the same the magnetic field, to be acted on the electric current it is flowing the coil.

At a circuit LRC Thompson the electric field is alternated. So, in the coil, there is changing voltage $dV=LdI^2$, because it is alternated the current. So, if we have the indefinite integral, then $V=LI^2$.

Again, in a capacitor of the circuit Thompson, $dV=(1/C)dq^2$ and again, $V=(1/C)q^2=(1/C)I^2T^2$, where T is the period of the alternated current. There is the same voltage in the coil and in the capacitor, then $f^2=1/LC$. This frequency is different of the found of the stated physics.

The capacity $C=q^2/V$ and $q=E.Vol$ (as we are found for the F and $E=F/q$), then because $E=V/d$, d=distance of the armatures of the capacitor, $C= VA^2$, and A=surface of the armature.

ORDERS OF THE CREATION OF THE ATOM AND THE MOLECULE OF HYDROGEN OD THE GODDESS

The creation of the hydrogen atom, is coming from zero. A bubble of ether it is created of the cavity of the shell of the central bubble, it was coming far from it and it was separated in two smaller bubbles. The one has positive electric charge and the other equal negative. And because we were stopped the meaning of the electric charge, the one bubble has ether mass o and $o^{1/2}$ is the electric currier, it is having different of phase π of its oscillation, of the corresponding other, in the hydrogen atom. Here we have two cases,

1st case. As the big bubble is separated to the two smaller bubbles, then is is acting the turning moment $\mathbf{T}=\mathbf{r}x\mathbf{F}$ on the one bubble and one equal and opposite to the other bubble $\mathbf{T}=\mathbf{r}x(-\mathbf{F})$.

That is, we have the moments system $\mathbf{T}=\mathbf{r}x\mathbf{F}$, $\mathbf{T}=\mathbf{r}x(-\mathbf{F})$ (1)

The radius r´ is infinitesimal small and the force F is acting vertically to the radius, and it is empirically infinite. It is created the preferential system, with the begging O between the two bubbles (in this system are the moments).

The force F will be acting until the velocity of the initial motionless bubble of the preferential frame system has velocity c, it is the velocity of the light and the radius of r´is coming to r. And c is the velocity of the atom of hydrogen in the first state of revolving (The atom of hydrogen is a bonded photon). In this process, the initial infinitesimal radius r´ is increased to the radius r of the atom of hydrogen. So, we will have that the kinetic energy would be,

$$E_k=\int_{\infty}^{c} m \frac{dv}{dt} dx= \tfrac{1}{2} mc^2- \infty \quad (2)$$

The infinite energy is indeterminate, and it is omitted. And for the two bubbles the atom is having, the energy is $E_k=mc^2$.

During the creation of this velocity, it happens the inequality,

$$F = \frac{e^2}{\frac{4}{3}\pi r^3 \varepsilon_0} < m\frac{v^2}{r/2} \qquad (3)$$

Until it is formed the potential energy in the atom radius $r=1.45\times10^{-8}$ met, from the initial infinitesimal r', it is,

$$E_T = \int_{r'}^{r} -\frac{e^2}{\frac{4}{3}\pi R^3 \varepsilon_0} dR = \frac{e^2}{\frac{8}{3}\pi r^2 \varepsilon_0} - \infty \quad (4)$$

Because they are two bubbles, the energy is doubled and it is ignored the negative empirically infinite energy (this is happening, because the r' is infinitesimal). And because it is cyclic rotated motion of harmonic oscillator, the energy is $E_k=E_T$.

2nd case.

$$F = \frac{e^2}{\frac{4}{3}\pi r^3 \varepsilon_0} \gneqq m\frac{v^2}{r/2} \qquad (5)$$

$$E_T = \int_{r'}^{r} -\frac{e^2}{\frac{4}{3}\pi R^3 \varepsilon_0} dR = \frac{e^2}{\frac{8}{3}\pi r^2 \varepsilon_0} - 0 \quad (6)$$

Where the r' is on empirically infinite radius (for the into forming atom). Every bubble is coming from differed separation of the bigger bubble to the two smaller bubbles and the other is coming from separation of bubble, in empirically infinite distance, in relation to the final r. They are nearing the two bubbles, of empirically infinite radius, on r.

We remember to you, that $m=o$, $e=o^{1/2}$.

The molecule of the hydrogen is two homo-parallel electric rings of atoms, they are rotated around the axis is parallel with the two diameters of the two rings. It is in force the inequality, the two rings were coming on opposition, of empirically infinite distance,

$$F = \frac{2e^2}{\frac{4}{3}\pi R^3 \varepsilon_0} \gneqq 2m\frac{v^2}{R/2} \qquad (7)$$

Where two (2) are the attraction forces, of the four bubbles, they are coming to radius R/2 of the revolving around the central axis between two opposite and homo-parallel rings. This force between the parallel rings for the formation of hydrogen molecule, is acting of empirically infinite distance, till the rings coming in radius R and then, the two rings have potential energy, as above is indicated,

$$E_T = \int_{\infty}^{R} \frac{2\mu_0 I^2 2\pi(\frac{r}{2})}{2\pi R} dR = \frac{2\mu_0 o f^2(\frac{r}{2})R^0}{0} = 2\mu_0 o f^2(\frac{r}{2}) \quad (8)$$

Remember we said that $a^0=1$, but and $a^0=0$, it is meaning the zero (0) could be replaced with the number one (1). This potential energy, is the energy of the molecule of the hydrogen.

The eight equations and inequalities that we were given, are the orders of the Goddess in the creation of atom and molecule of hydrogen and we compete them with the follows,

$$\oint \mathbf{e_0}.\mathbf{E}d(\text{Vol}) = q = e = o^{1/2} \qquad (9)$$

$$\oint \mathbf{B}.d\mathbf{S} = 0 \qquad (10)$$

$$\oint \mathbf{B}.d\mathbf{l} = \mathbf{\mu_0}.\mathbf{I} \qquad (11)$$

$$\oint \mathbf{E}.d\mathbf{l} = dV \qquad (12)$$

The equation (9) is coming from the law of in reverse cubic power, for the force between the two bubbles (the dielectric constant is vector, as the magnetic permeability).

The equation (10) is meaning that the magnetic field it is running the atom, or molecule surface (a spherical surface it is closing it, or a cyclic), is zero, because the incoming potential lines are equal to out-coming). There are not monopoles.

The equation (10) is the magnetic field of the electric current, it is vector too, (it has direction and curve and measure).

The equation (12) is the voltage it is creating of the cyclic electric field, i.e. on the length of the peripheral of the atom. And because we said for the voltage, the Goddess was given the 13th equation, the,

$$V=k(m/n^2e^3A^2)I^2=k(1/o^{1/2})4\pi^2r^2I^2 \qquad (13)$$

Because $n=N/\text{Vol}=1/\text{Vol} =1/A2\pi(r/2)$, (n=1 the bubble) and $I=ef =o^{1/2}f$. It is exercise for you, to be calculated the constant k, with the equations (12) and (13).

The third equation of Maxwell is wrong. It is,

$$\oint \mathbf{B}.d\mathbf{l} = \mu_0\varepsilon_0 \frac{d\Phi_B}{dt} + \mu_0 I.$$

But $d\Phi_B/dt=\text{€}=V$ (physics Halliday-Resnick), then $V \neq (1/\varepsilon_0)I$ and the third equation is wrong.

CONCLUSIONS

They were given in abstractly the factors they are driving in the being of the matter, of our cosmic theory.

The personal Goddess, is born her self from something indeterminate and she is the Total.

The physics philosophy of Democritus is being known of the writing, because he is understood right his phrases, and it is the beginning of our theory.

The religions are finding very little justification here, and the Plato's ideas are the cautions of the creation, when they were in conception of the Goddess, into absolute Zero, the zero-vacuum of Democritus.

The personal Goddess was born her self, she was invented the superior theory and she was creating. The Logos (Logic) is way of the thought and of the existence, and it is superior upper reality. And it is in the mind of the Goddess.

The Time and the Opposition are idioms of the person and they are coming from the Logos.

They were created new mathematics of the zero and the infinite and the energy is immaterial "fluid" it is coming in the matter. The absolute Zero, the Infinite and the Time and Opposition, are idioms of the Goddess.

The tensor is in literal, an expected a vector, to other vector of other universes, so, the illogical matter of the universes is in the same structure in the different universes.

The continuing of the tensors is that the scalar sizes, of the ether mass and corresponding electric field, will be equal and opposite in the parallel universes. The oscillation of the ether mass creates the attraction and the difference of the phase π of two roots of the ether masses, are corresponding to the two electric charges, or electric curriers, in atoms.

The no uniformity and the anisotropy of the space of the universes, is driving the observer to see the distribution of the matter as he think it is infirmity and isotropy.

The unit systems are irrational, not consequences. And the atom of hydrogen is described of two theories they are in combining and it is consisted of two bubbles of ether.

The cosmic theory is coming out new physics, it has great possibilities.
